Press Release

Defence organisations strengthen resilience with Wibu-Systems' CodeMeter

Offline licensing and strong protection ensure compliance and security in the most demanding environments

Karlsruhe, Germany / Hengelo, the Netherlands, October 2025

Wibu-Systems, global leader in software protection and licensing, is highlighting the role of its CodeMeter technology in supporting defence organisations across the Euro-Atlantic region. With growing regulatory pressure and the increasing risk of tampering and piracy, CodeMeter offers a secure, compliant and flexible licensing framework, designed for mission-critical environments.

"Defence organisations need absolute certainty that their software runs exactly as intended, without manipulation and without reliance on permanent connectivity," said Ton van der Berg, Sales Director & CCO at Wibu-Systems Euro-Atlantic. "With CodeMeter, we provide that assurance: safeguarding intellectual property while giving organisations the licensing flexibility they require."

The challenge for Defence companies

Modern defence relies heavily on advanced software. But illegal copies, reverse engineering and manipulation pose significant threats to intellectual property and operational safety. Compliance with regulations such as NIS2, CRA, and ISO 62443 adds further complexity. In the field, limited or restricted connectivity means that purely online solutions are not enough.

The CodeMeter advantage

With CodeMeter, defence organisations benefit from:

- **Offline licensing** with CmDongles, ensuring reliable access in disconnected field operations.
- **Strong protection** against reverse engineering, tampering and piracy.
- **Flexible models** that align with operational needs, from feature-based to time-limited licenses.
- **Regulatory compliance** with NIS2, CRA, and ISO 62443 requirements.

More details, including dedicated resources for the Defence sector, can be found at www.wibu.systems/defence.

A trusted partner for mission-critical industries

CodeMeter is already trusted by innovators in high-security environments. At **Createc**, for instance, the CodeMeter technology safeguards mission-critical software in nuclear decommissioning projects, where remote access is not an option and compliance is non-negotiable. This proven track record demonstrates how CodeMeter meets the toughest operational requirements. Read more about the Createc use case at www.wibu.systems/use-cases/createc

About WIBU-SYSTEMS

WIBU-SYSTEMS AG (WIBU®), headquartered in Karlsruhe, Germany, was founded in 1989 by Oliver Winzenried and Marcell Buchheit. The company is an innovative market leader in security technology for global software license management. Wib Systems' broad portfolio provides protection for all types of digital content, including intellectual property and software applicatio for computer systems, mobile solutions, industrial automation and cloud services.
WIBU-SYSTEMS BV/SARL and LTD are independent entities led by Marcel Hartgerink, Ton van den Berg and Hu Oosterbroek.Operating under the name Wibu-Systems Euro-Atlantic, this cluster of companies is responsible for activities in t Netherlands, Belgium, Luxembourg, France, the United Kingdom, Ireland, Portugal, Spain and the Nordic-Baltic Eight.
